

Cotton: World Markets and Trade

Note: Cotton Textile Imports for 2023/24 includes only August 2023 – March 2024; Source: Trade Data Monitor, LLC.

Iran's 2023/24 cotton [consumption](#) is projected to exceed the previous year's record at 900,000 bales with nearly all cotton yarn used for domestic [textiles](#) and [products](#). In the past decade, Iran cotton production has stagnated around 300,000 bales while cotton imports have roughly doubled to over 500,000 bales to meet rising domestic use. The top suppliers include neighboring countries such as Tajikistan, Turkey, and Uzbekistan.

Iran cotton consumption has grown by nearly 40 percent over the past 4 years, making it one of the largest cotton consumers in the Middle East and a top 15 user globally. The country's textile and garment industries have benefited from lower electricity and labor costs relative to other major manufacturers. Furthermore, data from the International Textile Manufacturers Federation showed Iran's spinning capacity has notably expanded with recent and significant investments in air-jet and rotor machinery.

Cotton textile imports have doubled since 2019 but remain less than half the volume of cotton fiber imports. Despite these increases in available inputs, Iran's exports of cotton fabric and products remain negligible. Instead, most textiles are channeled to domestic apparel and home textile production and sold internally. One factor driving the shift to domestically produced apparel is less access to imported products amidst a depreciating currency and economic sanctions. This has spurred greater domestic manufacturing as outlined in this article from The Economist found [here](#).¹

¹ "Iran's flourishing stockmarket reflects its resilient economy," *The Economist*.

2023/24 Outlook

Global production is virtually unchanged at 112.9 million. Consumption is lowered over 100,000 bales to 112.8 million. Increased use in China is more than offset by decreased use in other countries, notably Pakistan and Turkey.

Global trade is up 700,000 bales to 43.9 million as China imports are raised by 1.3 million bales to 14.2 million bales, the highest level in 11 years. This is partially offset by Pakistan imports projected down by 400,000 bales due to lower consumption. Brazil and Australia exports are both forecast higher by 500,000 and 250,000 bales, respectively.

Global ending stocks are forecast down nearly 300,000 bales to 83.1 million as an increase in China is more than offset by reductions in Australia and Brazil as well as lower beginning stocks.

The U.S. farm price is lowered 1 cent to 76 cents per pound.

2023/24 Trade Outlook (1,000 480-lb Bales)

Major Importers:

	Previous	Current	Change	Reason
<u>WORLD</u>	43,236	43,936	700	
China	12,900	14,200	1,300	Exporter data exhibits strong future imports
Pakistan	3,400	3,000	-400	Weak import data
Indonesia	2,000	1,900	-100	Lower consumption

Major Exporters:

	Previous	Current	Change	Reason
<u>WORLD</u>	43,263	43,966	703	
Brazil	11,200	11,700	500	Strong seasonal exports
Australia	5,750	6,000	250	Strong export data
Turkey	1,250	1,400	150	Strong export data
Argentina	600	500	-100	Weak export data
Greece	975	875	-100	Weak export data
India	2,000	2,100	100	Strong February shipments

Futures and Spot Prices

Cotton futures fell dramatically after reaching \$1 last month, with the nearby May 2024 contract on the Intercontinental Exchange (ICE) settling at roughly 86 cents per pound. Futures dropped despite stronger values for commodity indices, which were mostly due to a rise in crude oil futures. Speculative participants sold greater volumes of cotton futures with the latest Commodity Futures Trading Commission *Commitment of Traders* supplemental report for futures and options showing the net long

position for both Non-Commercial and Index falling from the highest level in 2 years to roughly 130,000 contracts (around 13.5 million bales). Also, certified stocks on the ICE exchange exceeded 135,000 bales (as of April 9) compared with roughly 25,000 last month. This was the highest level since early 2021 and an additional factor pressuring prices.

Weekly ICE Cotton Futures and Bloomberg Commodity Spot Index

Note: The Intercontinental Exchange nearby Cotton No.2 Futures contract is reflected and found [here](#). The Bloomberg Commodity Spot Index (BCOMSP) is listed [here](#). The index measures the price movements of futures contracts for various commodities. It does not account for the effects of rolling futures contracts, or the costs associated with holding physical commodities and is quoted in USD.

Changes Since March WASDE (cents per pound)

	A-Index	U.S.	China	India	Brazil	Pakistan
6-Mar	101.1	89.9	108.4	93.9	86.0	93.5
9-Apr	92.7	79.2	107.7	92.2	79.3	94.1
Change	-8.4	-10.7	-0.7	-1.7	-6.7	0.6

U.S. prices are down more than 10 cents to roughly 80 cents per pound. Basis is down once again across most regions with Southeast dropping to -275 basis points compared with -175 last month. North and South Delta dropped to around -350, and West Texas-Kansas-Oklahoma declined to -1,000 from -750. Average basis across U.S. regions is nearly -700 points compared with -230 last year.

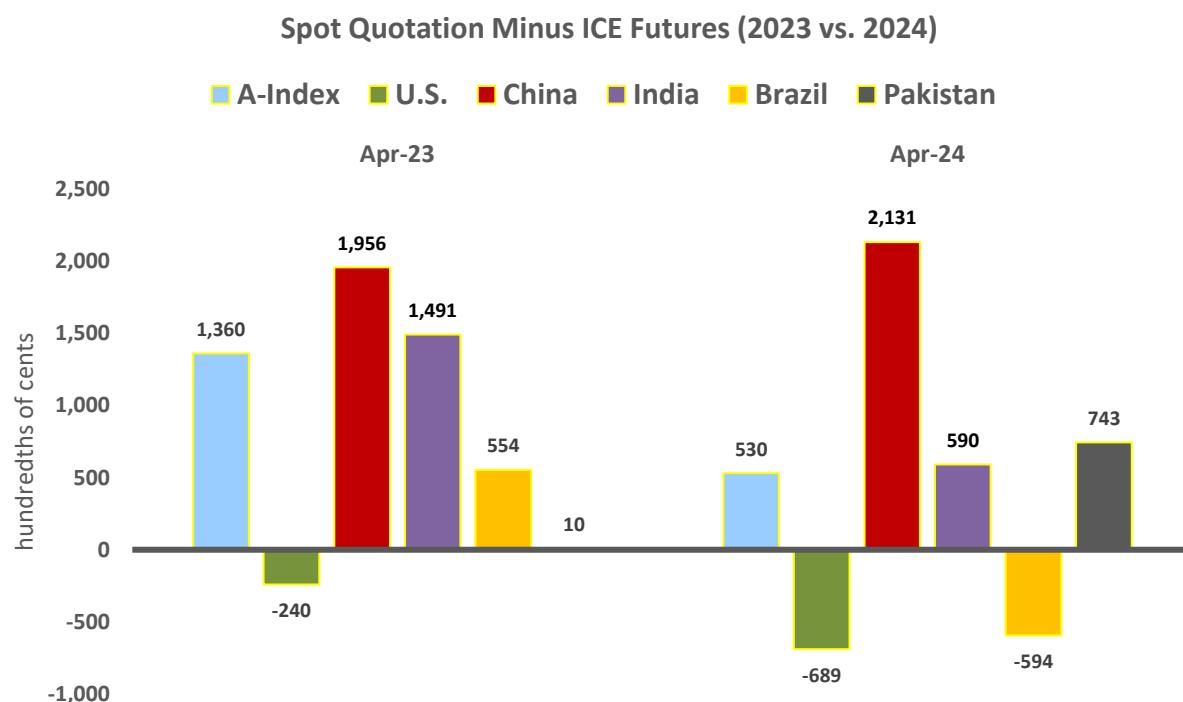

China prices are once again unchanged at 108 cents per pound with the nearby futures contract on the Zhengzhou Commodity Exchange (ZCE) rangebound at around 16,200 yuan despite the significant downfall in U.S. cotton futures. Basis (relative to ICE) rose nearly 900 points this month to 2,150 and is above last year's level.

India prices are down 2 cents to around 92 cents per pound. Spinning mills are reportedly operating at high levels relative to capacity and supports the slight drop relative to the United States. Basis (to ICE) is up nearly 800 points this month to around 600 points, noticeably higher relative to two months prior when basis was -600.

Brazil prices are down nearly 7 cents per pound to 79 cents after reaching the highest level in nearly a year. Basis is up 300 points but more than -600 points below ICE and roughly on par with U.S. spot prices.

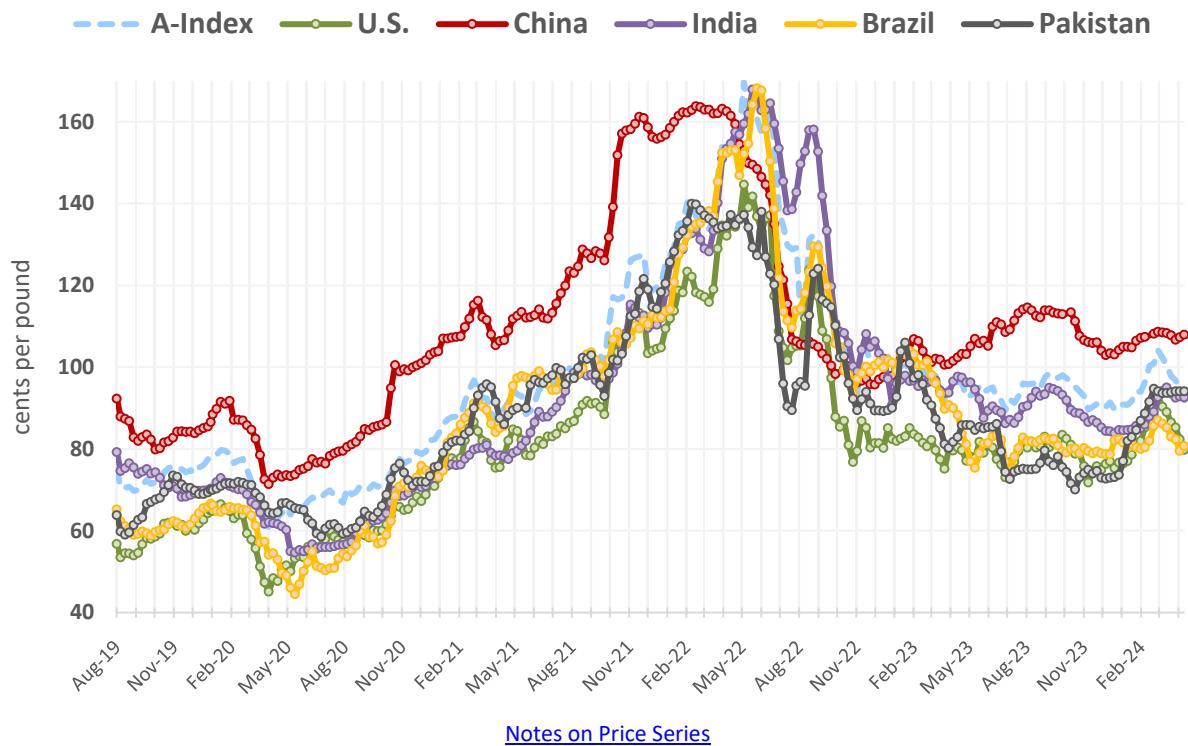

Pakistan prices are unchanged at 94 cents per pound due to low available domestic stocks as depicted by data from the Pakistan Cotton Ginners Association. Basis surged nearly 1,000 points this month to around 800 points, however, trading volumes are likely low.

The observed **A-Index** this month includes the simple average of the following 5 origins: Brazil, Ivory Coast, Burkina Faso, Australia, and India. Brazil is now the lowest quoted origin at 89.50 cents per pound; India is the highest at 96.25 cents and in stark contrast to being the lowest quoted origin last month. The A-Index relative to ICE is only 8 cents higher and down from the previous year's difference of 14 cents. Note the A-index includes the 5 *cheapest* origins of 'medium grade' cotton landed at a port in the Far East; quotations are compiled and published daily.

Notes: The chart visualizes a general value for basis (i.e., cash price minus futures). Quality and location (gin, port, textile mill, etc.) are significant in determining the quotation's relative value and basis, please see [Notes on Price Series](#) for more information.

Weekly Cotton Prices

[Notes on Price Series](#)

U.S. Cotton Exports

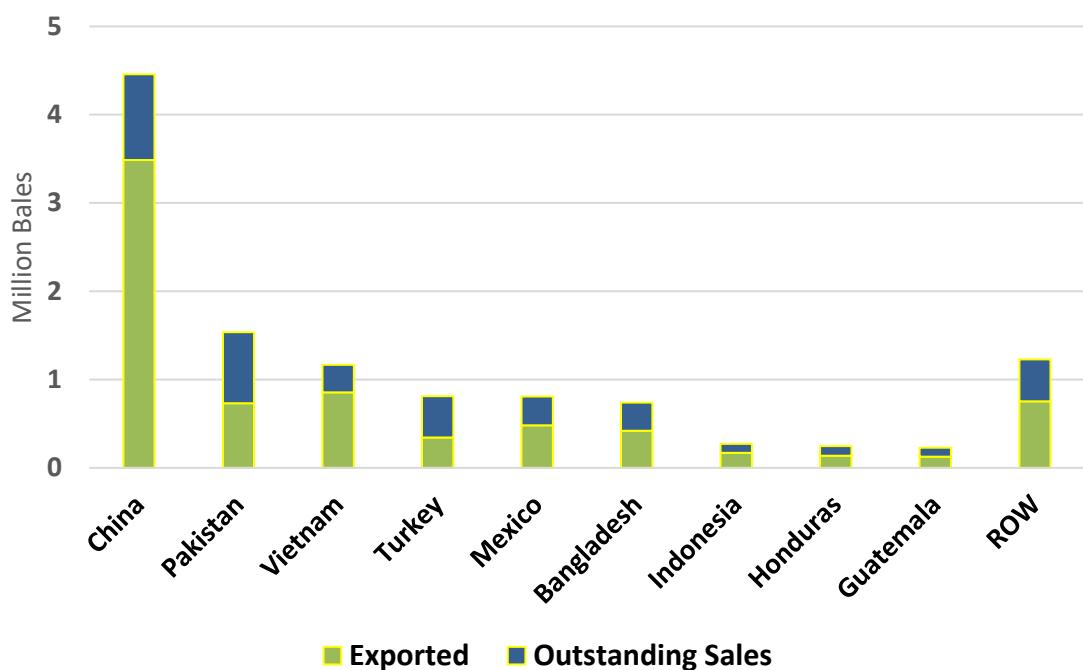

1,000 480-pound bales

Month-Year	U.S. Census	USDA Export Sales Reporting	Mid-point	Census Minus ESR
Aug-23	1,039	974	1,007	64
Sep-23	654	644	649	10
Oct-23	390	507	449	-117
Nov-23	558	480	519	77
Dec-23	1,106	985	1,045	120
Jan-24	1,181	1,220	1,201	-39
Feb-24	1,535	1,222	1,378	314
TOTAL	6,463	6,033	6,248	429

Note: USDA Export Sales Reporting (ESR) is published in running bales and converted to 480-lb bales (multiplying each running bale by 1.03 to convert into a 480-lb statistical bale). In the table above, the month listed for ESR is an FAS computation. USDA/FAS Export Sales Reporting can be found [here](#).

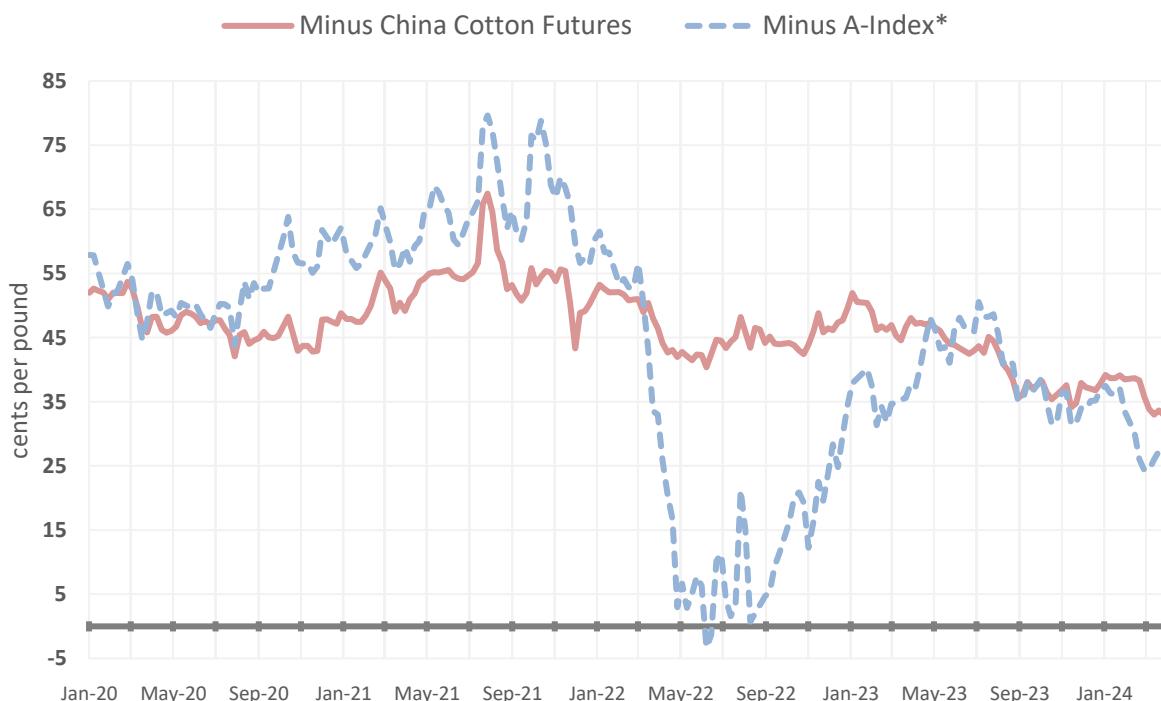

U.S. Census data is published in kilograms and converted to 480-lb bales monthly. Since 2017/18, the USDA methodology for forecasting and estimating marketing year (Aug. – Jul.) U.S. cotton exports is formulated by the simple average of U.S. Census and USDA ESR shipments during August - July. Please see [USDA Methodology for Calculating U.S. Cotton Exports](#) for more information. U.S. Census cotton exports have cumulatively exceeded USDA ESR by more than 5 million bales since marketing year 2017/18. The U.S. Census data can be found on the USDA/FAS Global Agricultural Trade System ([GATS](#)) website in addition to the U.S. Census Bureau website found [here](#).

U.S. 2023/24 Shipments & Outstanding Sales (Aug. 1, 2023 - Mar. 28, 2024)

China Cotton Yarn Futures Relative to Cotton

Note: *A-Index is a customs-cleared estimate in China (including 1-percent tariff and 9-percent Value Added Tax). The cotton yarn and cotton futures prices used are the nearby contracts on the Zhengzhou Commodity Exchange.

A time series showing the difference in the futures price of cotton yarn and cotton lint is an indicator of potential changes in spinners' profitability and thus marginal changes in global cotton consumption. China yarn futures are included here because of the country's prowess as the largest cotton yarn manufacturer (i.e., cotton consumer) and importer of cotton fiber and yarn.

Cotton Fiber Relative to Competing Fibers

Note: *A-Index is a customs-cleared estimate in China (including 1-percent import tariff and 9-percent Value Added Tax); Polyester Staple Fiber (PSF) and Viscose Staple Fiber (VSF). China Cotton is the spot price noted in the Price Series below.

A time series showing the difference in the spot price of cotton fiber relative to Polyester Staple Fiber (PSF) and Viscose Staple Fiber (VSF) is an indicator of potential changes in spinners' incentive to increase their substitution of synthetic and artificial fibers for cotton. China is depicted here because the country is the largest consumer of all fibers. The A-Index is also included to derive the difference in price between imported cotton and competing fibers in China.

Stephanie Galbraith – Foreign Agricultural Service

(stephanie.galbraith@usda.gov)

Notes on Price Series

A-Index is published by Cotton Outlook and reflects the average of the five cheapest quotations (quality being middling 1^{1/8} inch) of upland cottons traded internationally; the delivery price reflects Cost and Freight (CFR) to a Far Eastern Port.

U.S. is the simple average reported by the Agricultural Marketing Service, Free On Board (FOB) car/truck across seven U.S. spot markets of grade strict low middling.

China is the reported China Cotton Price Index (i.e., CCIndex 3128B) and reflects the national weighted average of middling grade cotton; the delivery price is at the textile mill in China.

India is the Shankar-6 (middling grade 29-3.8-76) spot price and is reported ex-gin (at the gin yard) in Gujarat.

Brazil is strict low middling and reflects the delivered price to a mill in São Paulo.

Pakistan is the ex-gin (at the gin yard) price in Karachi reflecting a 1^{1/16} inch staple and grade 3.

Jun-22	China 2021/22 Imports Lowered Again This Month
May-22	2022/23 Global Cotton Consumption Forecast Down from Last Year

Production, Supply, and Distribution (PSD) Attributes for Cotton

(Note: Area Harvested is reported in thousand hectares and all other attributes in thousand 480-lb bale equivalents.)

Marketing Year: August – July, for example, the 2023/24 marketing year is August 1 2023 – July 31 2024.

Area Harvested: The area of land planted to cotton from which seed cotton is harvested.

Beginning Stocks: The quantity of cotton lint physically located within a country on August 1 (the first day of the marketing year, for example, August 1 2023 of the 2023/24 marketing year) and includes cotton lint in transit. Beginning stocks equal the ending stocks of the previous year.

Production: The quantity of cotton lint ginned from harvested seed cotton during the marketing year and does not include cotton [linters](#) (short fibers attached to cottonseed).

Imports/Exports: The quantity of cotton lint physically imported into or exported from the country during the respective marketing year. This includes the Harmonized System (HS) code specific to the four-digit heading 5201 (Cotton, not carded or combed) and specific to unprocessed cotton lint. For some countries, imports include cotton bales in bonded warehouses that have *and* have not cleared customs.

Domestic Use: Also referred to as cotton consumption or mill use. All cotton lint that has been processed during the marketing year and excludes cotton linters. Domestic yarn production (100% cotton fiber or cotton blended with other fibers) usually accounts for more than 90 percent of domestic use. Yarn production occurs at a spinning mill and hence is also referred to as “spinning”. Use outside of yarn production typically includes nonwoven fabric production (see [nonwoven products](#)).

Ending Stocks: The quantity of cotton lint physically located within a country on July 31 (the last day of the marketing year, for example, July 31, 2024 of the 2023/24 marketing year) and includes cotton lint in transit. Ending Stocks will always equal the following year’s beginning stocks.

Loss: Cotton that has been destroyed or cannot be accounted for. Loss may also include “negative loss” when the estimates of Ending Stocks exceed the difference between **Total Supply** and total use (total use is equal to **Exports** plus **Domestic Use**).

Other Terminology

Cotton Textiles: Refers to both the yarn and fabric industries. This mostly pertains to spinning mills (yarn manufacturers), weavers (woven fabric manufacturers), and knitters (knit fabric manufacturers).²

Cotton Products: Refers to end-use products including apparel and home goods (e.g., towels and bed sheets) as well as [nonwoven products](#) (e.g., medical and hygiene products). When referencing “cotton product” trade data, certain imports are not included that contain cotton fiber. Circular analyses include

² Dyeing operations can occur anywhere between the manufacture of yarn, fabric, and end-product but typically at the fabric mill.

HS (Harmonized System) codes that specify cotton as the primary fiber and typically state “of cotton” in the product code description.

Garment Manufacturers: Typically reflects cut-and-sew and finishing operations to assemble and produce the final end-products such as apparel (i.e., cotton products).

Example of Cotton Supply Chain

Cotton planted [**Farm**] → Cotton harvested [**Farm**] → Cotton ginned to separate lint from seed and compressed into bale (represented as Production in the PSD) [**Gin**] → Cotton bales spun into yarn or fibers processed into nonwoven products (represented as Domestic Use in the PSD) [**Spinning Mill**] → Yarn woven or knit into fabric [**Fabric Mill**] → Fabric is dyed and processed [**Fabric Mill**] → Finished fabric is cut-and-sewn into apparel or other finished product [**Garment Manufacturer**] → [**Retailer**]

The Foreign Agricultural Service (FAS) updates its production, supply, and distribution (PSD) database for cotton, oilseeds, and grains at 12:00 p.m. on the day the *World Agricultural Supply and Demand Estimates* (WASDE) report is released. This circular is released by 12:15 p.m.
